

Smarter UC Lifecycle Management and Provisioning Automation

Simplify

UC management and provisioning of users and devices.

Automate

MACDs (moves, adds, changes, deletions) and day-to-day operations.

Delegate

Routine tasks to the service desk to employees.

Migrate

To the cloud or to other technologies at your own pace.

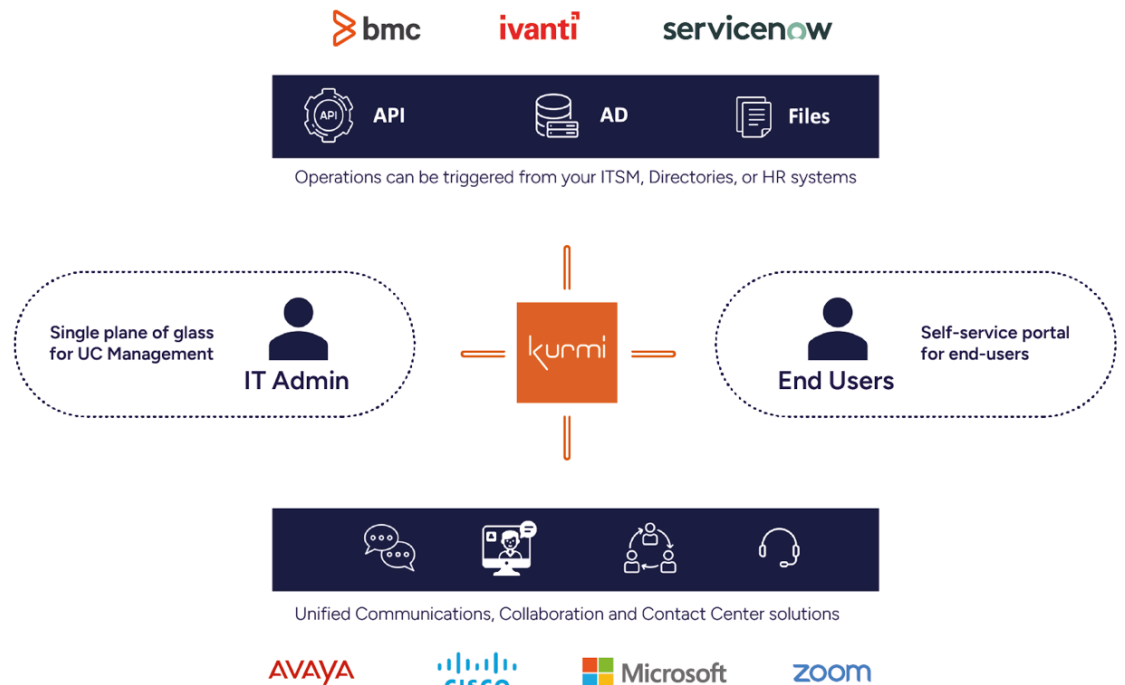

To support hybrid work, organizations are making significant investments in new Unified Communications (UC) solutions and devices that have created significant challenges for IT administrators.

Kurmi delivers a state-of-the-art management platform that automates and simplifies the administration of today's UC ecosystem from a central point. Kurmi Provisioning Suite combines exceptional performance, configurability and security to optimize UC investments across apps, whether on-premises or in the cloud.

A Single Pane of Glass for End-to-End UC Management

Streamline your workflows on a single pane of glass. Kurmi Provisioning Suite supports legacy UC on-prem platforms as well as cloud-based apps and sits on top of multi-vendor environments, enabling a single source of truth for configuration management and policy enforcement.

Integrations with HR systems and Active Directories provide a "zero-touch" experience for users and administrators by automating the process of provisioning and deprovisioning users and their devices.

Better Business Outcomes

Reduce operations complexity

by providing your IT staff with one simple solution to manage all your UC systems.

Save Time:

Reduce time to provision users from hours to minutes.

Save Costs:

Cut admin costs by up to 80%

Reduce Errors:

Increase data quality by avoiding human errors.

Empower Admins:

Open the door to higher level, more fulfilling work by reducing the IT admin's workload and creating efficiency.

KURMI PROVISIONING SUITE

Advanced Automation for the Modern UC Team

Onboard Users and Devices

Kurmi's platform simplifies onboarding and offboarding tasks, such as setting up accounts and devices, assigning roles and permissions, and configuring software and applications.

Day-to-Day Operations

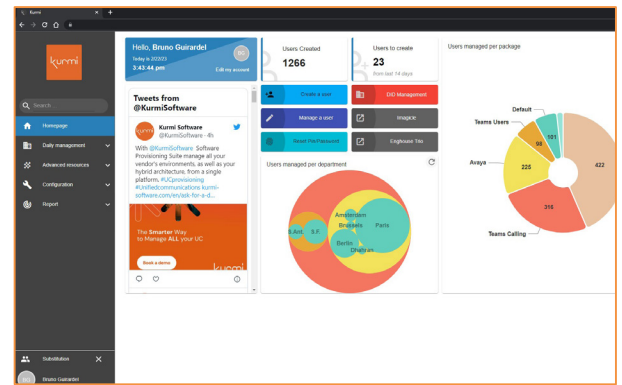

Set up automated actions for adding, removing, and moving users to improve UC provisioning workflows, reporting, and compliance.

Phone Number (DID) Management

Real-time management of directory numbers with cross-cluster support.

Role-Based Access Control

Delegate specific roles to trusted individuals, so that they can access and manage your unified communication (UC) system with confidence.

Bulk Management

Bulk end-user management is easy with Kurmi's automation tools for end-user deployment. Save hours of time by performing one deployment for groups of users with similar profiles, without concern for data loss or errors

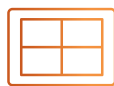

User Migration Made Easy

Kurmi discovers user details (like assigned phone numbers, services, security profiles) from your existing environments and imports them directly. Data migration is seamless and aligned with your business rules.

License Management

Minimize expenditures on new UC licenses by efficiently using your existing pool of licenses.

Which Solution is Right for You?

Kurmi Provisioning Suite for Enterprises:

Manage enterprise UC solutions through a single pane of glass.

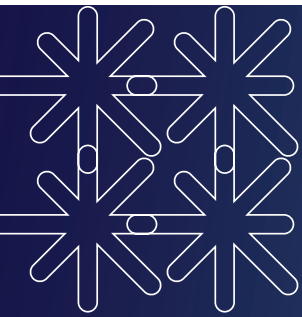

Kurmi as a Service:

Award-winning Kurmi Provisioning Suite hosted in the Cloud.

Kurmi Provisioning Suite for MSPs:

Designed for Managed Service Providers with powerful multi-tenant features.
